CONTENTS.

Officers 4
List of Members—Honorary, Life and Annual 6
Minutes (Giving all the events and transactions of the meeting in the order of their occurrence, but omitting papers, reports, discussions, etc., which appear on subsequent pages under topical heads.) 13
Addresses of Welcome 16
Response to Addresses of Welcome 18
President's Annual Address 20
Report of Committee on Local Arrangements 25
Practical Protection of Orange Trees—All known devices tested by a scientific but practical grower—With artificial heat and without—Dormancy, hybridizing, whitewashing, spraying, banking—Open fires fail utterly or only partially protect—Shields, Sheds and tents do the work—Sheds best of all—Orange culture placed on a business basis 26
We Do Not Give Up the Orange—Words of hope and encouragement—Prophetic utterances 39
Fascination of Orange Culture—It will never die—Dormancy the one great requisite 40
Damage from Cold and Best Methods of Prevention—Shed covers with coke burning salamanders—A success 41
Sheds of Split Cypress Lath—Rationale of protection—A plea for better weather forecasts 42
Personal Experience of a Practical Man—Tenting and Shedding—Rapid covering—A lamp that can be depended on 44
Irrigation Under Sheds 51
Insects Under Sheds 53
Protection with Boxes—Detailed description—Protection perfect—Cost will be about $4.00 per tree in five years 55
Maintaining Permanent Orchard Fertility—Deep plowing—Good ventilation—Use of lime—Cropping with field crops to use up nitrogen—Application of mineral—Wide planting recommended 57
The Production of a Hardy Orange 60
Diseases and Insects of the Citrus—The white fly—Common long scale—The brown fungus as a friend of the tree 63
Practical Peach Culture—Requisites of success stated by an experienced grower—Rich land for peaches, poor land for pears—Never prune without good reason—Errors as to pear blight 68
Oral Report—Profit in peach culture—Avoid pruning—The Oviedo variety 72

Diseases and Insects of the Citrus—The white fly—Common long scale—The brown fungus as a friend of the tree 63
Practical Peach Culture—Requisites of success stated by an experienced grower—Rich land for peaches, poor land for pears—Never prune without good reason—Errors as to pear blight 68
Oral Report—Profit in peach culture—Avoid pruning—The Oviedo variety 72

Notes on Current Entomology—Joint report of the committee—A hopeful and encouraging statement—Cottony cushion scale not to be feared—Crude petroleum as an insecticide 75
Pineapples and Other Tropical Fruits—Beginnings on Indian river—Historical statements—Some discussions of varieties—Irrigation not necessary on the East Coast—Few diseases encountered 83
Tropical Fruit Growing in Southwest Florida—Not available for commercial purposes—Plant only for home use 90
Protection of Pineapples from Frost—At Orlando, the interior pineapple center—Minute, practical description of some devices used 91
The Strawberry—Considered historically and commercially—Best varieties up to date—Excellent advice as to packing 94
Report on Ornamentals—The hardy shade and ornamental trees of Florida—Native or adopted shrubs and vines 96
Discussion on Vegetable Blights 97
Election of Officers 98
Selection of Next Place of Meeting 98
Report of Secretary 100
Report of Treasurer 101
Report of Executive Committee 101
Grapes, Figs and Kaki—High praise of the scuppernong—Caprifigs introduced from Smyrna into California—A hopeful event—Japanese methods needed with the kaki 102
Streaks of Sand Called Roads—Linked sandiness long drawn out—Death to ambition and farm profits—Road funds wasted and diverted—"Abnormally developed acquisitiveness"of road officials—Wretched patchwork system—Here a little work, there a little and nothing done—Good roads could easily be built—What they would do for the State 109
The Rationale of Marketing—High rates and hard treatment—Gluts and dearths the shipper's great enemy—The general shipper makes the market, hence the merchant is powerless—The shipper also is powerless—Strong and wide organization the only hope—An able and philosophical paper 116
A Year's Experience in Practical Protection—The McFarland tent—Every defect cured—Proof against water, insects and mildew—Can be closed in a few seconds—With artificial heat inside it affords perfect protection. 120
Florida vs. Porto Rico—For the fruit grower contemplating migration 124
Cassava Culture—Fall planting not recommended—Bank the seed canes in an upright position—Cutting and planting 128
Destruction of Florida's Forests—For lumber and turpentine—Comparison with Indiana forests—Useful products that might be obtained—Paper-making from pine 133
The Pecan as a Grove Tree for North Florida—Carefully studied and excellent directions for planting, culture, pruning, etc 135
Report on Fertilizers and Irrigation—Recent rise in fertilizer explained—Lasting nature of fertilizers—Importance of irrigation—A very ingenious system at Sanford 140

Use of the Word Pomelo 146
Final Resolutions 146
Co-operation with the Agricultural College 147
A Society Library 147
